EDUCATION

Bachelor of Science, Major in Computing and Software Systems Feb 2024 - Nov 2026
The University of Melbourne

- WAM: 86
- Westpac Asian Exchange Scholar, 2025; exchange at National University of Singapore.
- Relevant coursework: Design of Algorithms (H1), Object-Oriented Software Design (H1), Software Modelling and Design (H1), Artificial Intelligence (H1), Computer Organisation (A+, NUS)

EXPERIENCE

Affinda, Melbourne, Vic
AI Engineer Mar 2026 – Oct 2026

- Reworked employment-history extraction for an AI-powered candidate screening tool, replacing Affinda Document Processing with an LLM-based approach to distinguish professional employment from university club and society roles
- Developed a company-information tab displaying employer descriptions, website and LinkedIn links, and estimated headcounts; cached company lookups to reduce repeated requests and improve loading speed
- Built a Claude skill with the internal hiring manager to import candidate applications from SEEK via JazzHR despite API access limitations, matching existing jobs by title and requesting confirmation for ambiguous matches

Summer Intern Jan 2026 – Feb 2026

- Designed and implemented a modular contract-review engine with checks for inconsistent definitions, cross-reference errors, incomplete edits, and factual mismatches
- Compared four document-analysis architectures and tested GPT-5.2 and Claude Opus 4.5 in document-scanning and tool-calling workflows

AI Engineer Nov 2025 – Jul 2026
Connect3 - https://connect3.app/, Melbourne, Vic

- Built a crawler and RAG pipeline indexing ~3,200 documents from four universities, using OpenAI embeddings and metadata filtering to support semantic search and contextual question answering
- Built an LLM-powered “enhance text” feature allowing users to rewrite or summarise content across TLDRs, profiles, and event descriptions
- Deployed LLM-based validation for structured user profiles, detecting unsafe content and filtering PII

RELEVANT PROJECT WORK

Pseudo Donkey Kong
Object-Oriented Software Design (Coursework) - GitHub

- Developed a 2D platformer game in Java featuring physics-based movement, collision detection, and player-environment interactions
- Separated screen behaviour and game entities into dedicated classes; loaded object positions and gameplay settings from configuration files.

LEADERSHIP & ACTIVITIES

IT Director Mar 2026 - Sep 2026
Women In Tech (University of Melbourne)

- Led the development of a new website, closely collaborating with the graphics team
- Established a buddy system within the IT subcommittee to support younger students to participate more actively in technical projects

TECHNICAL SKILLS

- Programming Languages: Python, TypeScript, Java, C, SQL
- Technologies: Next.js, Supabase, REST APIs, OpenAI API, RAG, LLM tool calling, Git
